

# **NurseBrite**

Introduction and Demonstration

2021-02-25

# Overview

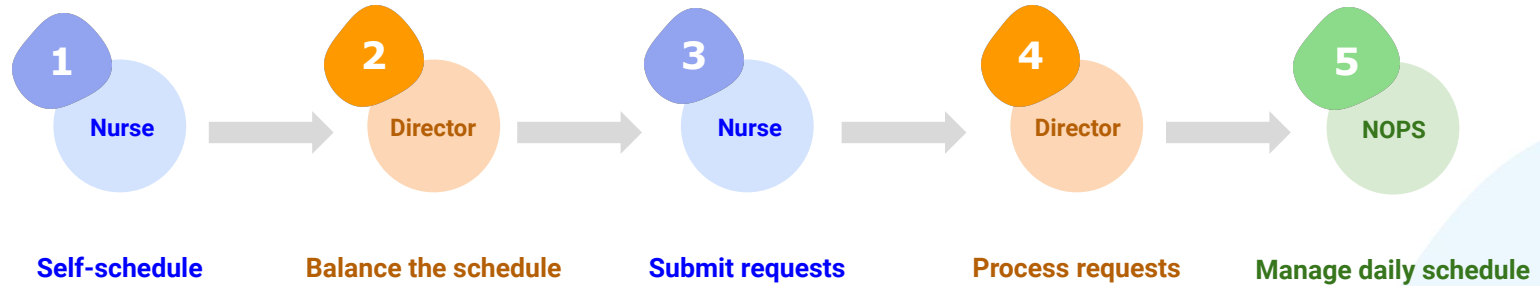

NurseBrite - the next generation solution that offers efficiency, flexibility, and clarity in hospital scheduling.

# Demonstration

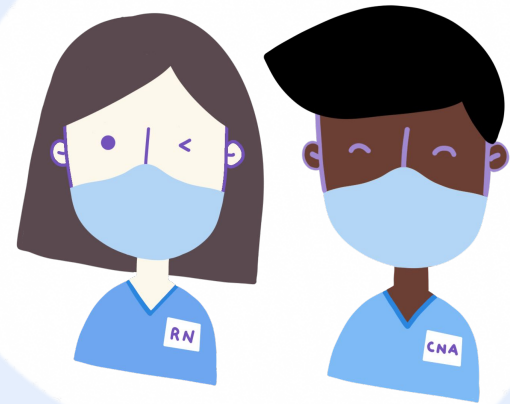

Agenda:

1

# Nurse

Self-schedule

# Self-schedule using mobile app

Nurses can self-schedule for any future dates (until scheduler/director starts to balance the schedule)

- Shifts
  - ◆ Regular shifts and “Av” shifts
- Events
  - ◆ List of event types allowed for self-scheduling is configurable

2

# Director

Balance the schedule

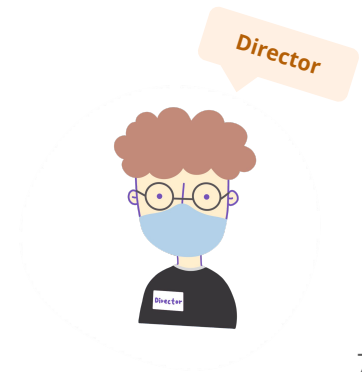

# Balances schedule using website

We now fast forward the schedule to its next stage - director starts to balance it based on nurses' self-schedule

- Schedule is “locked” for nurses, they are no longer able to make changes freely (need to go through requests)
- Director use the website to balance schedule
  - ◆ Get the full picture
  - ◆ View daily details
  - ◆ Quickly locate “errors” (under/over staffing, overtime, etc.)

3

# Nurse

Request for changes

# Submit request using mobile app

After schedule is “locked”, nurses need to submit requests for any changes they would like to make.

- Submit event request
  - ◆ The list of event request types is configurable.
- Submit swap request
  - ◆ Request to swap with others, or,
  - ◆ Confirm other’s request to swap with you
- View pending requests
  - ◆ Make changes to event request before it is approved
  - ◆ Withdraw pending requests
- View processed requests

4

# Director

Process requests

# Handles request using mobile app

Director will receive requests notifications

- While balancing the schedule, and
- Sometimes after the schedule is passed down to NOPS

Director can use either the website to handle all requests, or use the mobile app which provides more convenience.

- View and approve/reject pending requests
- View history requests

5

# NOPS (Nursing Operations)

Manage daily schedule

# Manages schedule using website

Again, we fast forward schedule to its next stage - it now becomes “current” and is being used for hospital’s daily operation.

- Nurses can still request for changes to their schedule, using the mobile app.
  - ◆ Nursing operator will handle those requests that are more “imminent”.
- Nursing operator view and manage a more detailed daily schedule
  - ◆ Enter the latest census
  - ◆ Manage staff based on the census
